

Stealth Series Overview and Instruction:

Your Broadway Limited Imports Stealth Series model comes with a jumper installed that will allow for movement and lighting during DC operation right out of the box.

In DC, the front and rear lights are directional while all other operational lights will be illuminated regardless of direction.

For DCC operations, you will need to purchase a separate 21-pin DCC decoder and install it where the DC jumper currently resides.

Some 21-Pin DCC motor/light decoders we recommend are:

DCC Decoder	Optional Sound Output
BLI 1892 – Dual-mode DC/DCC decoder. Automatically speed-matches a sound-equipped BLI model of same prototype in DC or DCC	No
Digitrax SDH168MT	Yes
ESU LokSound 59029	No
ESU LokSound 58429	Yes
SoundTraxx MC1H104P21	No
SoundTraxx Tsunami2 TSU 21-PNEM8	Yes
NCE D16MTC	No

If you wish to add sound to your model, please note that your BLI Stealth Series model comes with an 8-ohm speaker already installed and ready to use. If you prefer a different speaker, the speaker output is located on the motherboard.

For questions about the appropriate speaker and sound packages, please contact your DCC decoder manufacturer.
